TITLE INDEX

Application of modified ZBB and inventory control system in small merchandising businesses, 249
Cost and price indices, 3, 137, 237
Cost-benefit analysis of quality circles, 199
Diary of events, 135, 235
Economic model of a reactor containing decaying catalyst pellets, 33
Economics of two-pass machining operations, 263
Economies of scale and economies of scope in the U.S. postal service, 269
Editorial, 1
Effectiveness and efficiency of product quality inspection processes, 215
Evaluation of discounts in co-ordinated control inventory models, 15
Flexible multiobjective production planning framework for automated manufacturing systems, 189
Forecasting of working capital requirements under capital constraints – a Monte Carlo simulation approach, 223
Generalised sensitivity charts, 55
Goal programming applications for some problems in materials management, 157
Group-synchronized replenishment of inventory items, 129
Integrated product pricing and batch sizing model with stochastic demand, 27
Interactions in decision support systems: Division of labor in DSSs, 281
Introductory editorial, 1
Lot sizing under dynamic demand conditions:a review, 165
Planning the introduction and predicting the benefits of group technology, 117
Simulation of a group technology product cell, 45
Statistical modeling of overhead costs, 145
Strategic planning framework for chemicals and fuels production. Part 1: Allocation model, 291
Two heuristic methods for grouping inventory items, 211
